EDUCATION

App Academy

Full Stack Web Development

September 2024 - March 2025

EXPERIENCE

Kennedy Fabricating

Software Engineer

Splendora, TX

October 2025 - Present

- Automated a manual, 4x-daily time-tracking process for 300 employees by ingesting TimeClock Plus exports from an Amazon SFTP server into QuickBase via REST API, reclaiming ~5 hours/week.
- Architected an internal multi-agent AI development system on Anthropic's Claude Code to refactor, migrate, and maintain 541 production QuickBase code pages — six role-scoped subagents under an orchestrator pattern, plus MCP servers exposing scope-limited QuickBase tools.
- Eliminated recurring crashes and data backlogs in a 546K-record Python refresh service that was stalling production work — re-architected it with async I/O, request throttling, and batched deletes, resolved a trigger race condition, and added tiered error logging to QuickBase for faster incident triage.

LVC Solutions

Software Engineer Intern

Remote

March 2025 - September 2025

- Built type-safe REST APIs in Next.js/TypeScript on Firebase Firestore, enforcing strict schemas to reduce data-integrity errors.
- Enforced role-based access control by integrating Firebase ID token verification into backend routes, protecting sensitive user actions.
- Deployed Firebase Cloud Functions to send event-driven notifications for connection requests and approvals.

PROJECTS

Anime Watchlist Tracker

Technologies: Python, Flask, SQLAlchemy, React, Redux, PostgreSQL, AWS, Docker

- Built a full-stack anime search and watchlist app with Flask, SQLAlchemy, React, and PostgreSQL, integrating the Jikan API to surface 20K+ anime titles.
- Implemented a dual-function React/Redux search bar for seamless switching between anime and user searches, plus a follow/unfollow system for real-time activity updates.
- Added a decoupled notes service with AWS Lambda and DynamoDB, letting users annotate entries while improving modularity and scalability.

A & E Development Plus

Technologies: React, Vite, Tailwind CSS, Git LFS, Cloudflare

- Built and deployed a fully static, no-backend marketing site for high-end custom homes, optimizing WebP assets via Git LFS to score 93 Performance / 100 Best Practices on Lighthouse.
- Integrated Google Maps API for property locations and an EmailJS contact form to streamline client inquiries; added Google Analytics for traffic insights.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, C#, Bash

Frameworks and Tools: React, Next.js, Node.js, Flask, Docker, REST APIs, CI/CD

Databases: PostgreSQL, Firebase Firestore, DynamoDB, SQLite

Cloud & Tools: AWS (Lambda), Cloudflare, QuickBase, Git, n8n
