

Brian Rodriguez Martinez

SOFTWARE ENGINEER

Brian894526@gmail.com \\ 305-318-0502 \\ [LinkedIn](#) \\ [Github](#) \\ [Portfolio](#) \\ Miami, FL (Willing to Relocate)

Technical Skills: JavaScript | Python | C# | React (Next.js) | Flask | Node.js (Express) | PostgreSQL (Sequelize) | Firebase | AWS | Git | CI/CD | RESTful APIs | Docker

Relevant Skills: Results Oriented | Team Player | Fast Paced Learning

Interests: Anime | Gaming | Rock Climbing

PROJECT EXPERIENCE

Anigram - Python, Flask, Javascript, React, Redux, Docker, AWS, PostgreSQL

[Github](#) \\ [Live](#)

- Created an anime search and watchlist application with Flask, SQLAlchemy, and React, utilizing the Jikan API for data retrieval and PostgreSQL for database management.
- Designed and implemented a dual-function search bar in React and Redux, facilitating efficient switching between anime and user searches.
- Developed a follow/unfollow feature with Flask, SQLAlchemy, and React, enhancing database efficiency and enabling real-time user activity updates.
- Implemented a decoupled notes service with AWS Lambda and DynamoDB, enabling users to annotate anime entries with personal notes while improving application modularity and scalability.

CozyVibe - Tech Stack: Javascript, React, Express, PostgreSQL, Redux

[Github](#) \\ [Live](#)

- Designed and implemented a role-based access control system for a review and spot management platform, reducing unauthorized operations through the use of custom middleware.
- Developed and managed data models using Sequelize ORM, enhancing database efficiency for over 1,000 user-generated locations, reviews, and images.
- Engineered RESTful API endpoints for spot creation, booking, and reviews, enhancing user engagement with listings and reducing data inconsistencies.

WORK EXPERIENCE

Kennedy Fabricating | Software Engineer

Tech Stack: React, TypeScript, Python, Node.js, GitHub Actions, Bash, PowerShell, REST APIs, QuickBase, n8n

October 2025 – Present

- Standardized release and deployment processes for code pages serving a 300-employee manufacturing operation by building a centralized GitHub repository featuring bash-triggered deployment, multi-branch CI/CD, and a structured layout that isolated modern React/TypeScript from legacy jQuery.
- Eliminated a manual, 4x-daily time-tracking workflow (including a 3 AM run) for 300 employees by automating the end-to-end ingestion of TimeClock Plus WorkSegments exports from an Amazon SFTP server into QuickBase via REST API, reclaiming ~5 hours of operational time per week.
- Engineered a robust data pipeline as a scheduled GitHub Actions workflow on a self-hosted Windows runner with automated failure handling for late or malformed exports, applying an Excel-macro transformation to reshape raw CSV data for native QuickBase ingestion.
- Built and managed QuickBase Pipelines and n8n workflows to orchestrate high-volume data ingestion from external systems and inbound email, including a custom Gmail integration handling automatic label routing, archiving, drafting, sending, and deleting of shop-floor correspondence.
- Extended an internal Python transaction-processing backend critical to job throughput on the production floor, delivering new data-processing capabilities that ensured manufacturing jobs moved continuously end-to-end.

A & E Development Plus, Inc | Software Engineer

Tech Stack: React, Tailwind CSS, Vite, Git

September 2025 – October 2025

- Built a performant static site with React, Vite, and Tailwind CSS to showcase high-end custom homes, emphasizing responsive design and luxury branding.

- Integrated WebP images via Git LFS to optimize load times and asset delivery, improving visual quality and performance across devices.
- Added interactive Google Maps API components to display property locations and integrated EmailJS with a custom contact form to streamline client inquiries.
- Set up Google Analytics for real-time traffic insights and user behavior tracking, supporting data-informed marketing and business decisions.

LVC Solutions LLC | *Software Engineer Intern* | Remote

Tech Stack: Firebase Firestore, Firebase Storage, NodeJS, NextJS, Firebase Cloud Functions, React

March 2025 – August 2025

- Developed secure, type-safe REST APIs with Next.js and TypeScript, backed by Firebase Firestore, to manage user and company data in real time.
- Integrated Firebase ID token verification into backend routes to enforce role-based access control and protect sensitive user actions.
- Deployed Firebase Cloud Functions to trigger real-time notifications for connection requests and approvals, boosting user engagement.
- Built file upload and retrieval workflows with Firebase Storage, streamlining user content management and improving overall application usability.

EDUCATION | App Academy \ Full Stack Web Development
